Introducing Flood Ironworks

Flood ironworks Ltd has been in existence for over ten years.

Our staff specializes in stainless steel, architectural ironworks, structural glass, structural steel platforms, walkways and stairways.

In the past few years we have specialized in Clean room fit outs for such companies as MSD Rathdrum, Helsinn Birex and Rottapharm. This has included stainless steel cladding, bump rails and platforms.

At our base in Clonroche we have a 3000sq ft carbon steel workshop and a 1500 sq ft stainless steel workshop.

Some of the recent sites we have worked on are

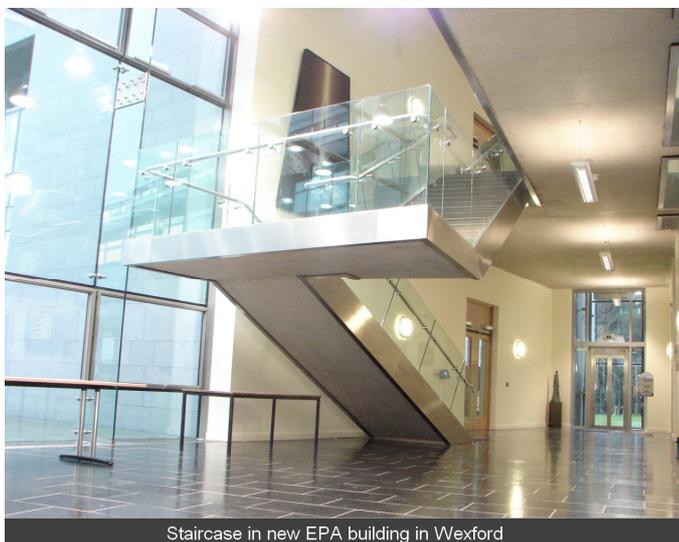

Access staircase, waste water treatment plant in MSD

the new Library in Wexford town, Turlough Hill power station, new swimming pool in New Ross, Elanco in Sligo and MSD Rathdrum.

Although based in the south East we have carried out work all over Ireland and as far away as Lucerne in Switzerland

Private home, Wexford

Staircase in new EPA building in Wexford

where we worked on the new MSD Headquarters.

We started off at creating bespoke gates and one off staircase. While this is no longer our core work we still enjoy the challenge of creating specialist pieces for discerning customers. Should you need any further information please contact Tom on 087-2026794.
